

SOLIS

Find. Use. Share.

A quick guide to Quantum's digital asset management platform

Provided by Bynder

Our new home for approved assets

We use Solis to find the latest approved files, download the right version, and share curated collections with the team—without digging through Slack threads or old email chains.

What is a DAM?

A digital asset management system is a searchable home for approved brand and marketing assets. Solis gives every team one trusted place to find, use, and share files.

Why Solis matters

Less time searching. Fewer duplicate files. Better asset reuse. Solis keeps our brand work consistent across every team.

How we use Solis

1

Open Solis

Start at solis.bynder.com and open the media library.

2

Search or filter

Use keywords, categories, and metadata to narrow results.

3

Check details

Preview the version, format, and usage notes before downloading.

4

Download

Choose the right size or format for the channel.

5

Share

Build a collection, share a link, or send feedback—no re-uploading.

Good Solis habits

- Check Solis first, before asking in Slack or email.
- Check the version and usage notes before using an asset.
- Share a collection instead of re-uploading a file.

Support and feedback

Training is grouped by role and use case, with ambassadors in each team ready to help. We gather feedback continuously to keep improving Solis.

Need help? Use the support or feedback form in Solis.

Success looks like: active users, faster search, more asset reuse, cleaner governance, and stronger brand integrity.
